DETAILED ACTION

Claims 8-14 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

On p. 6, what exactly is “integrated” to provide a single input value to the threshold circuit 49? Is it the value of *one* of the signals input to MUX 46 that has passed through multiplier 47, or is it all of the signals entering circuit 48f? How is a value for the “monitored test signal” (last line of claim 8) obtained for comparison with the “predetermined value” (last line of claim 8)?

Claims 8-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As to claim 8, “of” (line 2 from last) should read – if --. Also, “amplitude of the monitored test signal” (last line) is not consistent with the written specification. Specifically, the disclosure (p. 6) describes how monitored signals are somehow (note 112(1) above) integrated, and it is the integrated value (not the monitored test signal) that is compared with a reference in threshold circuit 49. Claim 8 is not consistent with p. 6 of the written specification.

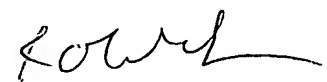

Claim 11 does not end with a period. Should this claim have an additional limitation, or is the semi-colon in error?

As to claim 12, what does "value of the integration" mean? Does it mean that integrating the plurality of "signals" results in one integration value? Should "value" read -- a value --? Also, isn't the "a threshold value" (last line) the same as claim 8's "a predetermined value" (last line of claim 8), necessarily resulting in the same value being claimed twice in claim 12?
